Anesthesia.....	Anesthetist.....	
Description of Operation		
Position: Prone		
Incision: <input type="checkbox"/> Posterior midline longitudinal incision <input type="checkbox"/>		
Finding: <input type="checkbox"/> Spinal canal stenosis level		
<input type="checkbox"/> HNP level		
<input type="checkbox"/> listhesis level		
<input type="checkbox"/> Fracture		
Procedure:		
- Prone position on the operative table.		
- Posterior midline longitudinal skin incision was done.		
- Subperiosteal dissection was done to identify posterior element of spine, and check level by c arm fluoroscopy.		
- <input type="checkbox"/> Partial laminectomy and Disectomy was performed at		
- <input type="checkbox"/> Inserted pedicular screw at under fluoroscopy.		
Then inserted rod and locked systems with nuts. <input type="checkbox"/> indirect reduction fx was performed.		
- <input type="checkbox"/> Decompressive laminectomy atwas performed.		
- <input type="checkbox"/> Posterolateral fusion with <input type="checkbox"/> autogenous bone graft <input type="checkbox"/> HA was done.		
- <input type="checkbox"/> fusion with, check under fluoroscopy.		
- Check and stop bleeding. Surgical wound was irrigated.		
- Radivac drain was placed. Muscle, fascia, subcutaneous layer was closed.		
- Skin was closed by <input type="checkbox"/> Nylon <input type="checkbox"/> Staple		
- Complication: <input type="checkbox"/> None <input type="checkbox"/>		
Tissue sent for pathology: <input type="checkbox"/> Yes <input type="checkbox"/> No		
Estimate Blood Loss ml Doctor's signature.....		
Wound classification: <input type="checkbox"/> Clean <input type="checkbox"/> Clean contaminate <input type="checkbox"/> Contaminated <input type="checkbox"/> Dirty
